Reviewer Name: Tyler Han

Reviewed Name: Dylan Weiner

Code coverage analysis:

Method Name	Code coverage	Proposed test(s) to include
VarExpr::subst(std::string name, Expr* newVal)	0	Test substituting with VarExpr

Thoughts / suggestions to improve the code or the tests:

test nullptr for VarExpr::equals
test runtime error throwing for VarExpr::interp()
test VarExpr::has_variable
test Num::equals nullptr
Test Add::equals nullptr
Test Add::has_variable (hatched pattern on right column, not sure about the reason, I assume it may be related to the comparison "||" (?))
Test Mult::equals nullptr

Add rows when necessary.
